

No prior React experience required

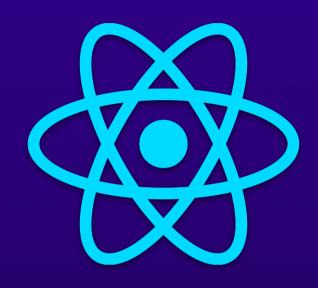

Basic web dev & JavaScript knowledge is assumed

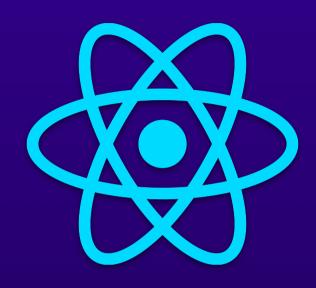

What Is React?

And why exactly would you use it?

A library for building user interfaces

A JavaScript library for building user interfaces

But why would you use it?

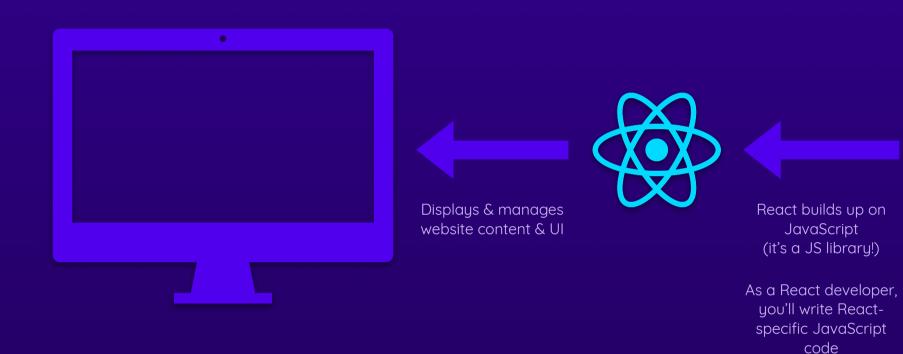

JS

Displays & manages website content & UI

React builds up on JavaScript (it's a JS library!)

As a React developer, you'll write Reactspecific JavaScript code

In the end, it's JavaScript doing the "magic"

React just uses
JavaScript features

JS

Why not just JavaScript?

Using "Just JavaScript" Isn't A (Great) Option

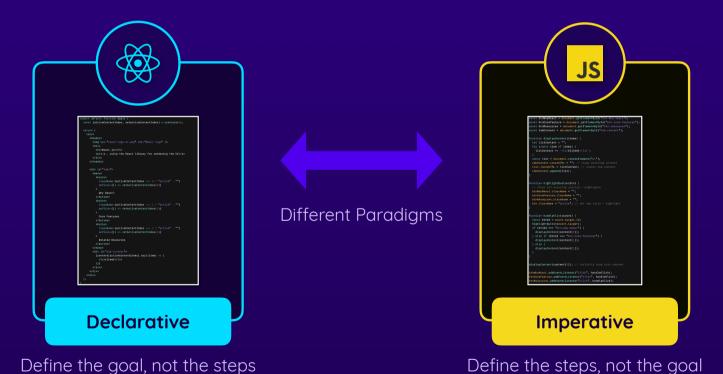

- It quickly becomes **cumbersome**
- It quickly becomes **error-prone**
- It quickly becomes **hard to maintain** or edit
- React offers a way simpler "mental model"

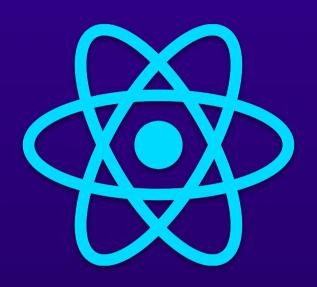

React = Declarative UI Programming

With React, you define the target UI state(s) — not the steps to get there

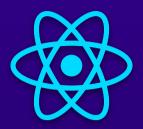

Instead, React will figure out & perform the necessary steps

Our First React App

Time To Get Your Hands Dirty!

Our First React App

Time To Get Your Hands Dirty!

About This Course

Standard Path

Fast-track Path

Standard Path

Recommended

Start in lecture 1 in section 1

Proceed through course lecture by lecture, section by section

Learn React from the ground up & in great detail

Fast-track Path

If you're in a hurry or you just want a React refresher

Complete section 1, then advance to **section 30** (React Summary section)

Just the React essentials

Less deep dives & less advanced concepts

How To Get The Most Out Of This Course

Watch the Videos

At your pace: Use the video player controls

On-Demand: Repeat videos & sections as needed

Code Along & Practice

Pause & try things on your own

Practice what you learned (also in your own projects)

Use attached slides & code snapshots

Help Each Other

Ask & answer in the Q&A section

Join our amazing Discord community!

Creating React Projects

Local Setup

Create React projects **locally** on your system

Requires installation of tools & creation of files on your system

Use a locally installed code editor (e.g., VS Code) with **any settings and extensions** of your choice

Browser-based Setup

Create **remote** React projects via CodeSandbox (or similar)

No software installed, no files created on your local system

Use a (mostly) **pre-configured** code editor inside of your browser
